CRYO LOCAL

Local Cryotherapy Device

Applications

Health & Beauty

Modern medicine solutions

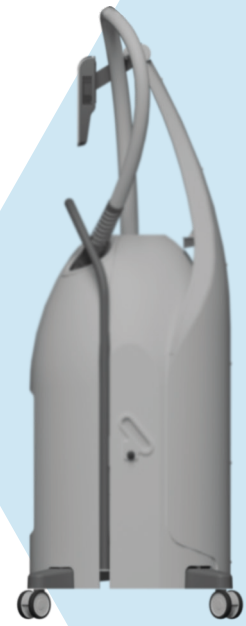

Sport & Post-traumatic rehabilitation

Cryotherapy is an internationally recognised method for improving health and beauty through the use of extreme cold penetrating the human body. To be effective, the treatment temperature must be a thermal shock to the cells of the joints. Only temperatures below -100°C produce measurable results from its use. Learn more about our device and its application possibilities to see the difference with similar devices on the market today.

Meet the CryoLocal – the new advanced solution for localised Cryotherapy

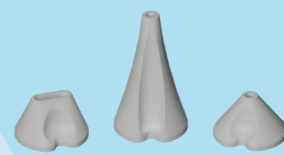

Thanks to innovative solutions, the CryoLocal creates new possibilities

- Adjustable treatment vapour temperature from -100°C to -150°C, refrigerator mode -10°C to -50°C
- Ergonomic design of the unit's components makes operation easy and pleasant
- Filling the gas vessel requires little effort

- Special control system makes more efficient use of the refrigerant
- Modern design allows the device to be used in beauty treatments
- Machine's components are designed for a long service life

- Device uses liquid nitrogen and electricity
- Maintenance costs reduced to a minimum
- Gas vessel capacity of 50L or 30L
- CE Certificate, Certificate Medical ready

- The illuminated treatment area allows precise control of the skin during treatment and enhances beauty treatment options
- Quick control of the treatment in the handle saves time in use

- Control programs allow the equipment to be used even by inexperienced personnel, but at the same time have protection against unauthorised use
- Multiple control programmes for individual body parts

- Interchangeable tips facilitate the use of the device in precise cryotherapy and in conjunction with aesthetic medical treatments
- extended tip makes it easier to reach all parts of the body

Sport & Sports Injuries

- A must have for physio's, sports scientists and other medical professionals in Football, Rugby, Cricket etc
- Perfect for the treatment of both immediate match day injuries and treating longer term injuries be they ligament, joint or muscle;
- A great adjunctive treatment alongside whole body cryotherapy

Recovery

- Helpful in physiotherapy in joint and muscle injuries in the early injury phase
- preparation for kinesiotherapy to reduce muscle tension and decrease painful conditions
- Treatment of Chronic Pain conditions around specific parts of the body

General Medical
